RE: Water Service Material Notice

It has come to the City's attention through our water service inventory process that all or a portion of the water service serving the above listed property contains lead. The Michigan Department of Environmental Quality has recently changed the definition of a lead service line to the following:

Lead Service Line means either a service line which is made of lead or any lead pigtail, lead gooseneck, or other lead fitting that is connected to the service line, or both.

Although there is no known current health or safety concern with your water service, the City is required to notify you and provide you with the information in the attached two flyers:

- Reducing Potential Lead Exposure
- Re-Occupying A Home

The City is also required to replace all lead water services within our distribution system over a 20 year time period and is currently developing a plan to meet this requirement. If you have any questions or would like to discuss this further, please contact me at (517) 337-9459.

Sincerely,

Ron Lacasse
